- ✓ No walk ins please.
- ✓ This is a two-dose vaccine and a second appointment will be made on site for 3 weeks after the first dose.
- ✓ Children must be accompanied by a parent or guardian for consent

Help Protect Your Child, Your Family, and Others

Getting a COVID-19 vaccine can help protect children ages 5 years and older from getting COVID-19.

- Vaccinating children can help protect family members, including siblings who are not eligible for vaccination and family members who may be at increased risk of getting very sick if they are infected.
- Vaccination can also help keep children from getting seriously sick even if they do get COVID-19.
- Vaccinating children ages 5 years and older can help keep them in school and help them safely participate in sports, playdates, and other group activities.

COVID-19 Vaccines Are Safe for Children and Teens

Before recommending COVID-19 vaccination for children, scientists conducted clinical trials. The FDA gave the Pfizer-BioNTech COVID-19 vaccine emergency authorization to use in children ages 5-15 years old and full approval to use in people ages 16 years and older.
